

- Most computational activities do not rise to the level of a project
 - Exception (I know): LQCD computing project (BNL, FNAL)
 - Exascale Computing Project, HEP-CCE, IRIS-HEP (don't know budgets)
- We do not have a list of future projects, but emphasize that the proposed Coordinating Panel on Software & Computing would be a natural place to develop such a list.
- That said: possibilities include an analysis facility, and quantum or AI/ML computing centers.
